Abstract of corresponding document: JP2003041283

PROBLEM TO BE SOLVED: To provide a lubricating oil composition which excels in fuel consumption saving performance at middle and high temperatures and, in addition, excels in wet clutch friction properties. **SOLUTION:** The lubrication oil composition comprises a base oil and, based on the total weight of the composition, (A) 0.003-0.1 mass%, in terms of Mo element, organomolybdenum compound, (B) 0.08-0.3 mass%, in terms of N element, boron-containing succinimide and/or boron-free succinimide at a mass ratio of component (B) in terms of N element to component (A) in terms of Mo element of ≥ 1.6 , (C) 0.01-0.16 mass%, in terms of an alkaline earth metal, alkaline earth metal-based cleaning agent, (D) 0.01-0.1 mass%, in terms of zinc element, zinc dithiophosphate, (E) ≤ 0.1 mass%, in terms of phosphorus element, phosphoric (phosphorous) esters and, simultaneously, with a sulfate ash in the composition of ≤ 1 mass%.
